

# SAP Integration Suite

SAP Integration Suite is an industry-leading and enterprise-grade integration platform-as-a-service that helps businesses seamlessly connect and integrate their applications, data, and processes within their organization and beyond. A starter collection of pre-built, best-practice integration packs helps integration developers achieve faster time to value. Execute the integration content on the Business Technology Platform or within your private landscape.

## Environment

This service runs in the SAP BTP, Cloud Foundry environment.

## Features

### Build Integration Scenarios

Discover, design, and operate scenarios for end-to-end process integration with Cloud Integration.

### Manage APIs

Discover, protect, govern, and publish APIs to developers with API Management and Graph. Ensure that your APIs comply with best-practice security policies.

### Manage Business Events

Publish and consume business events to seamlessly connect applications through event-driven architecture.

### Extend Non-SAP Connectivity

Connect to non-SAP cloud applications from your integration scenarios with Open Connectors.

### Implement Interfaces and Mappings

Design interfaces and mappings using crowdsourcing and machine learning with Integration Advisor.
